

Make the Most of Your Downtime!

Challenger Tip

By Emily Mason, Challenger Senior Technical Sales Manager, West Star Aviation, GJT

Make optimal use of your aircraft's downtime by scheduling additional services during your Challenger Landing Gear Inspection or Restoration. West Star offers a roll-around Challenger landing gear ship set, which allows us to remove the original gear from the aircraft for service, while still having the capability to reposition the aircraft for any additional services.

This allows us to simultaneously perform any corresponding airframe inspection or maintenance, as well as provide any avionics, interior, or paint refurbishments you need while your landing gear is being inspected.

West Star also offers a landing gear exchange/rental program that gives us the capability to complete send-in gear inspections to even further reduce downtime. Whichever option you prefer, make the most out of your downtime! This Challenger tip will save you time and money.
